

Twist & Pulse

Ephemeral Adaptation to Improve
Icon Selection on Smartphones

Antoine Ponsard, Kamyar Ardekani, Kailun Zhang
Frederic Ren, Matei Negulescu, Joanna McGrenere

Patterns of use

Context-aware

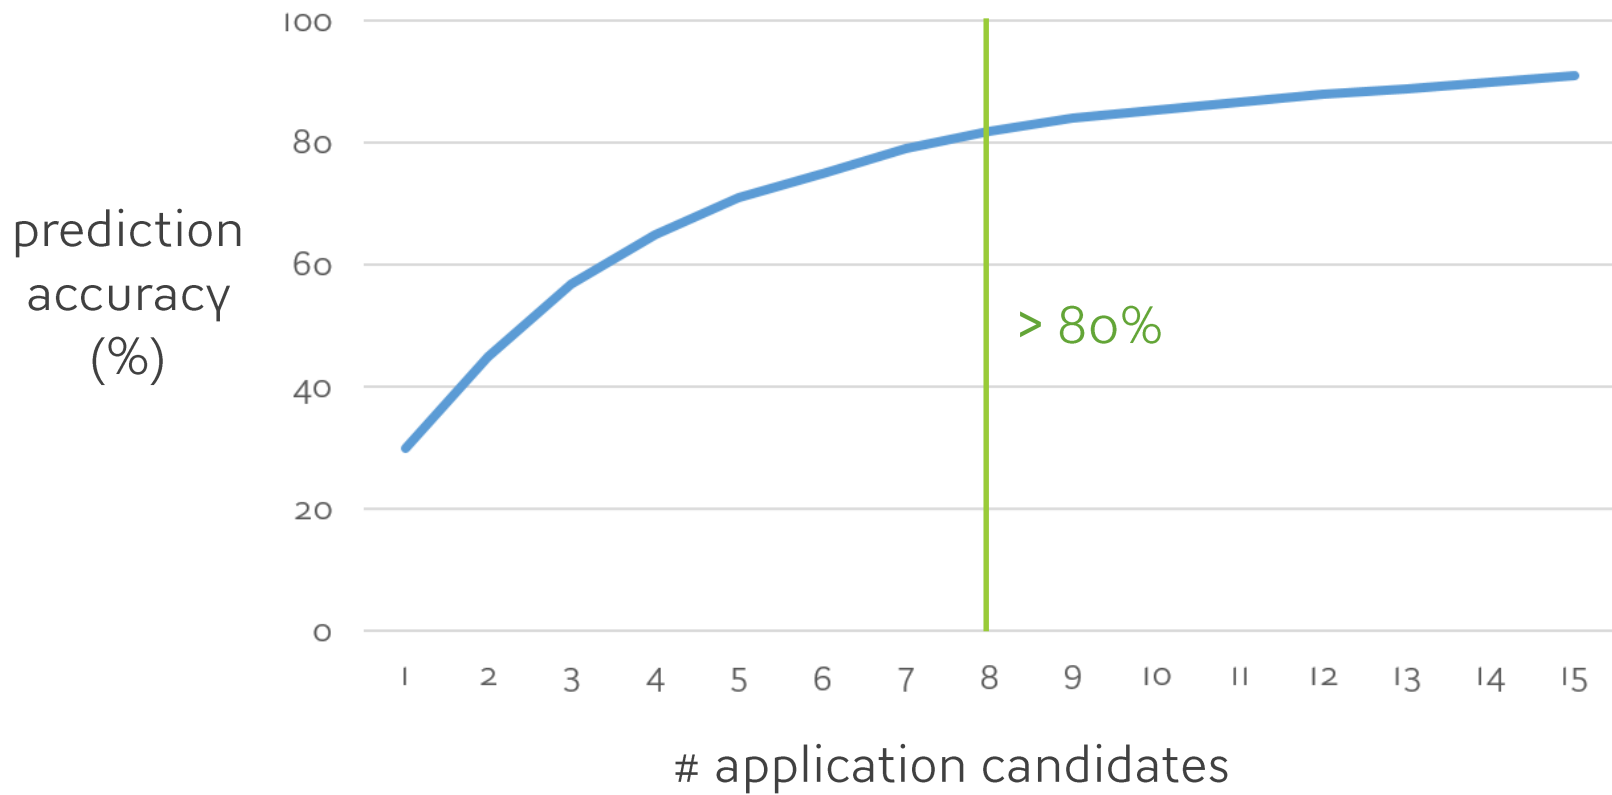

application candidates

Prediction algorithms

Attentional draw

Distraction

How to convey algorithmic **predictions** to the user
while balancing **attention** and **distraction**?

1. Design process | distraction
attention
2. Experiment

1. Design process

distraction

attention

2. Experiment

Ephemeral adaptation

1. adapt the interface for a short time
2. revert it back to its normal state

Ephemeral adaptation

Cheese	Wine	Bread
Gruyère		
Comté		
Emmental		
Abondance		
Tomme		
Reblochon		
Mont d'Or		
Tamié		
Brie		
Pont l'Evêque		
Camembert		
Boursin		

1. Design process

distraction

attention

2. Experiment

Preattentive visual properties

processed in parallel by visual system

DIRECT

“Shrink”

“Rotate”

“Pulse”

“Twist”

INDIRECT

“Greyscale”

“Transparency”

“Blur”

1. Design process

ephemeral adaptation

preattentive properties

2. Experiment

Effects

Twist, Pulse, Control

Pages

3 pages, 6 pages

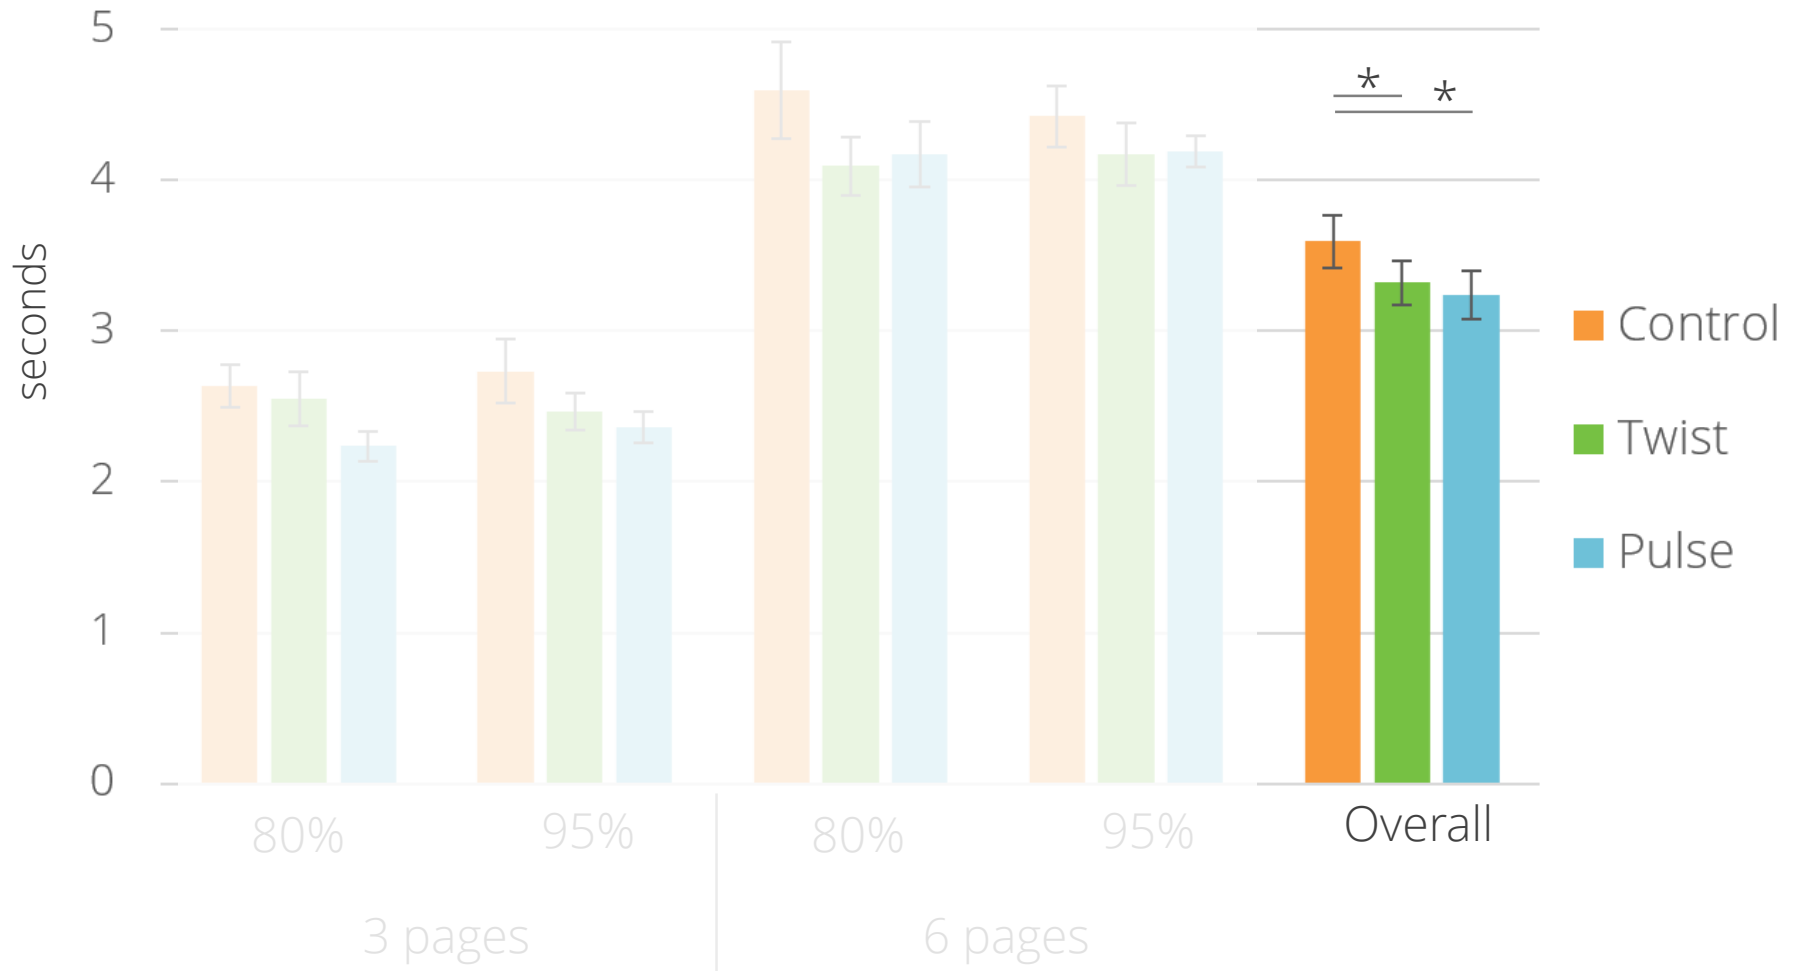

Accuracy

80%, 95%

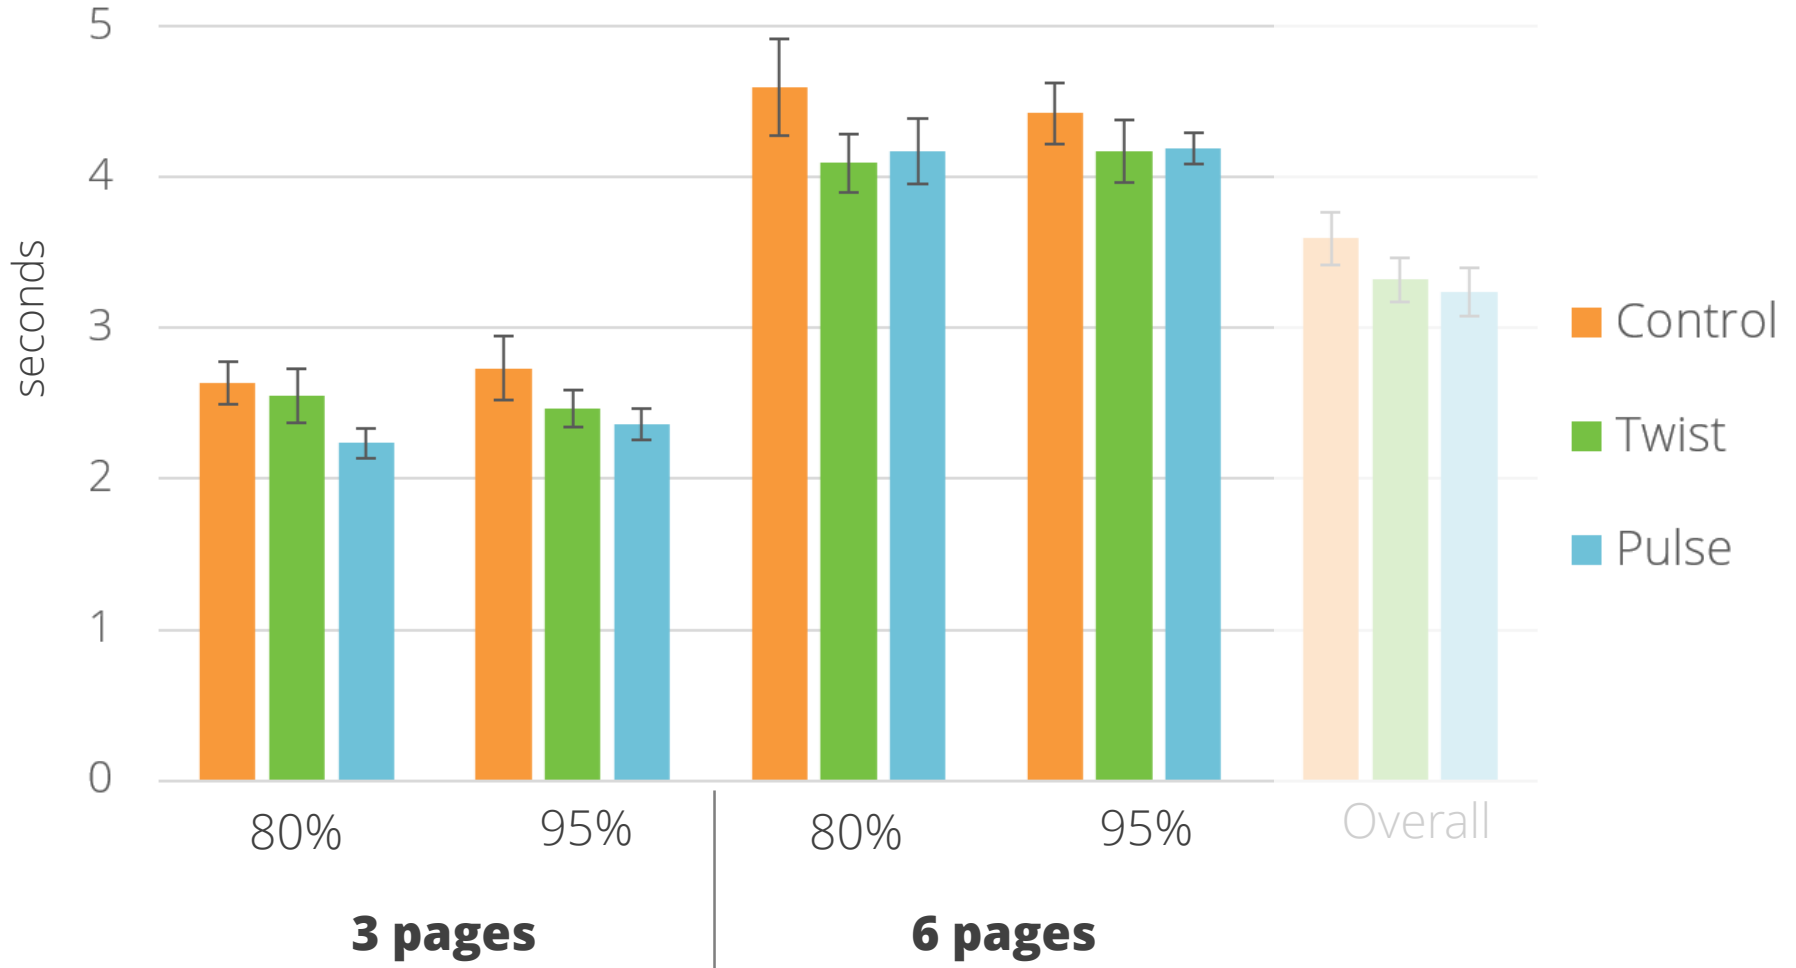

12 participants
480 trials each

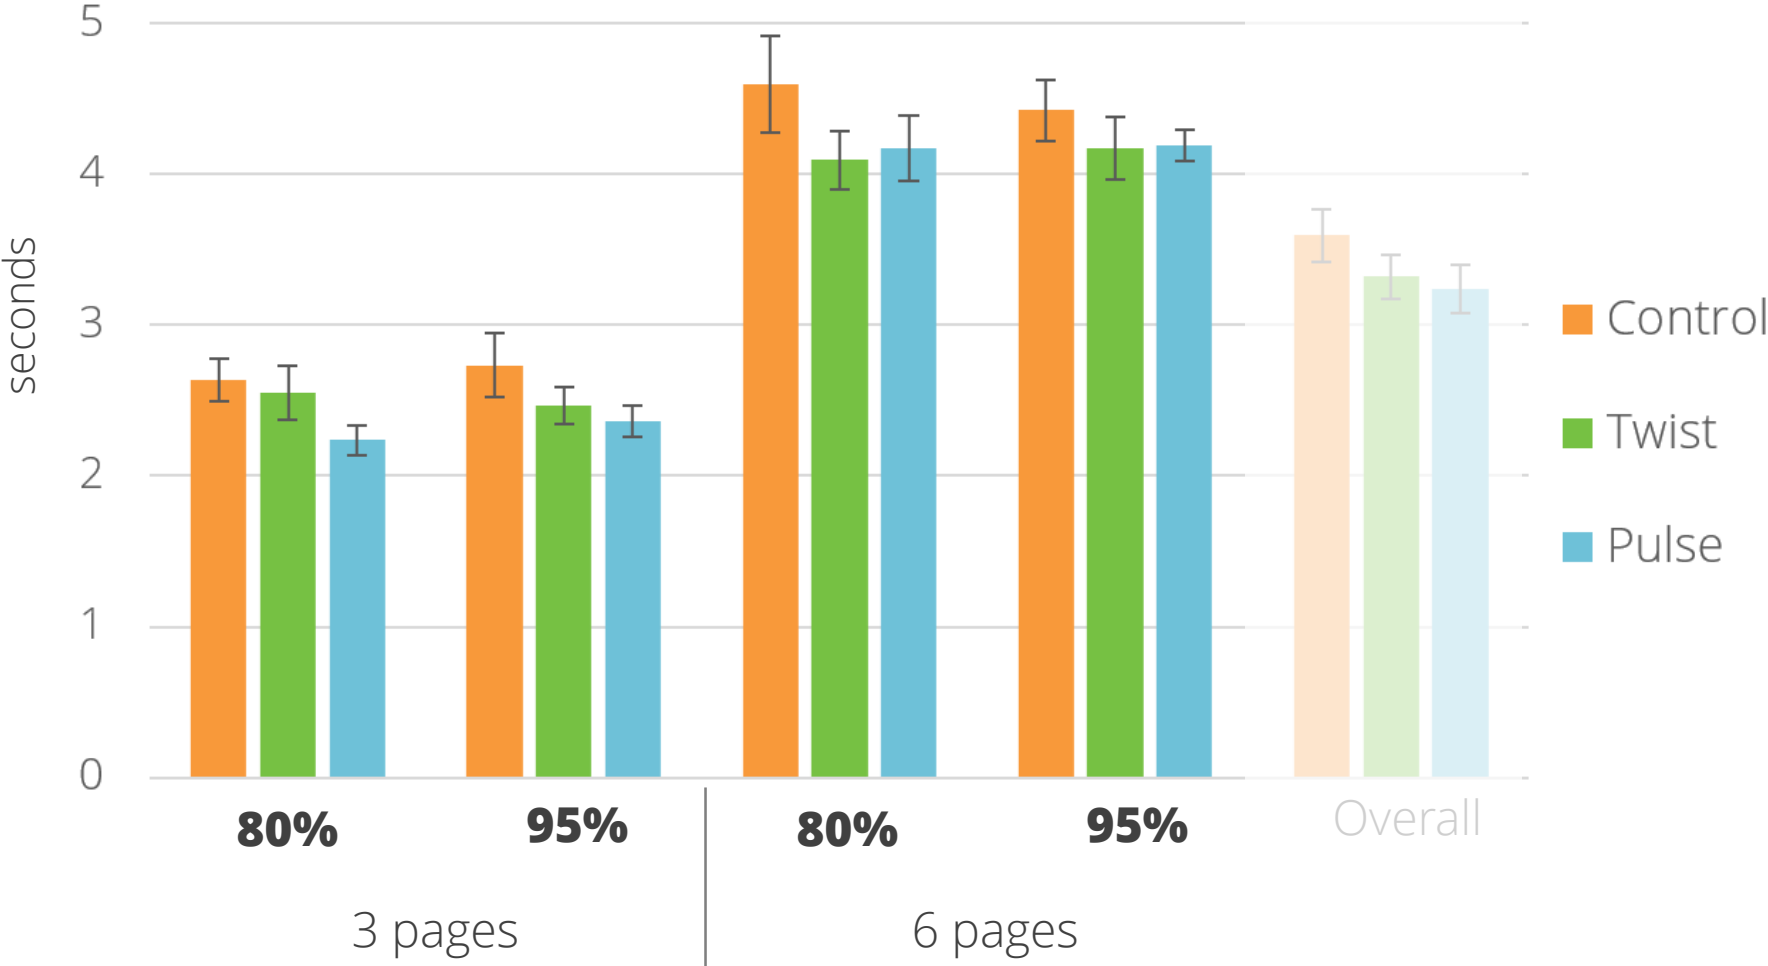

Twist and Pulse faster than Control

3 Pages **faster than** 6 Pages

No effect of Accuracy

No effect of accuracy

4x less errors at 95% than 80%...

...but more costly at 95%

Subjective results

11/12 Pulse > Control

9/11 Pulse > Twist

8/11 Pulse less distracting than Twist

Ephemeral highlighting for icon selection

Preattentive visual properties — motion

Twist & Pulse faster (8-10%) and preferred
